

Autodesk is one of the largest software firms in the world, and among the top 10 for revenue in the industry. In the 2011-2012 fiscal year, AutoCAD generated \$1.063 billion in sales and reported \$991 million in net income, according to Autodesk. AutoCAD has an estimated install base of over 20 million licenses as of 2012, and Autodesk reported that AutoCAD is the only proprietary desktop-oriented CAD application in use by any Fortune 500 company. (Autodesk reports that the company's on-demand and mobile apps are used by over 100 million people worldwide, and that AutoCAD for mobile was also the top-selling mobile app in February.) The PC version of AutoCAD was announced by Autodesk in October 1982 and shipped in December 1982. The software has since been ported to other platforms, and by August 2013, Autodesk reported that over 145 million installations of AutoCAD had been achieved on the most recent release, Autodesk AutoCAD 2014. Almost as soon as AutoCAD was released, its impact on the industry was immediate. Today, the software is a standard component in every CAD company's product line. CAD systems are now in the drawing tools of most software applications, and some now even offer the ability to perform 2D and 3D drafting in the same package. AutoCAD History AutoCAD was first created by Gerald Grosz, in response to a request by his company's engineering department. The software's first release, AutoCAD Version 1, was created in the fall of 1982. The first version of AutoCAD allowed users to create an assembly drawing, which involved creating a number of views of the drawing, each showing an individual component of the assembly. The user could then drag and drop the views onto a drawing canvas, where a single, complete assembly drawing could be constructed. Shortly after its introduction, AutoCAD was sold to a number of computer-related companies, including DEC, IBM, and Xerox. In 1988, the software was acquired by a startup company, Autodesk, Inc. Today, Autodesk is the owner of AutoCAD. Autodesk AutoCAD is one of the most popular CAD programs. It is estimated that over 20 million licenses have been installed. there are over 23,000 libraries, databases and web services that are able to interact with AutoCAD. Although AutoCAD is often referred to as a "raster graphics program" (based on the raster file format, which is an uncompressed image file format used in the publishing and electronic commerce industries), its capabilities and features are quite extensive and it can be used for vector graphics. Recent versions of AutoCAD are able to read and write DXF (AutoCAD Drawing Exchange Format). AutoCAD is used to draw computer-aided design (CAD) drawings for a range of industries, including civil engineering, construction, electrical, mechanical, chemical, architectural, landscape architecture, and architecture. Open source AutoCAD's documentation is freely available, but it must be used in conjunction with an AutoCAD subscription. For users who wish to contribute to the software development of AutoCAD, the AutoCAD Wiki and SourceForge are the main places to ask for help. [Incidence of adverse reactions in patients treated with calcium antagonists]. To determine adverse drug reactions (ADR) in patients treated with calcium antagonists and to compare the incidence in different age groups and in different diseases. Observational, descriptive study, carried out in a primary health care centre, based on the review of clinical records. Information was obtained from clinical records of patients treated with calcium antagonists in 2002. ADR were identified by the physicians and validated by one of the researchers. The total number of patients was 17,744, being women 71.2% and men 28.8%. The number of ADR found in women was 1,438, in men, 1,836, representing a total of 3,274 adverse events. The incidence was 10.66/1,000 persons. There were a higher number of ADR in patients over 70 years old than in younger people. ADR are common and the incidence increases with age. There are more women than men and more ADR in older people.

Q: ActionController::UrlGenerationError (cannot generate a URL for nil:NilClass): I've found lots of questions and answers on this issue, but nothing that I have found so far has helped me solve my problem. I am trying to run a query that I expect to return multiple results. The query works and returns results when I run it from my Rails console, but when I make an AJAX call to the same method, I get the following error: ActionController::UrlGenerationError (cannot generate a URL for nil:NilClass): I can't figure out how to resolve this issue. My query has a "Where" clause that filters out records based on a parameter passed to the method, but I have the filter commented out in order to try to figure out what part of my query is causing this issue. Here is the method I am trying to make the AJAX call to:

```
def search_logger.debug(params[:q]) @foo =
Foo.where(user_id: params[:q].split(',')).select('id').distinct @foos =
@foo.page(params[:page]).per(params[:per_page]) respond_to do |format| format.html format.js
