Mini Desktop Digital Alarm Clock Free

MouseTool is a utility that automatically enables/disables mouse buttons according to the current task or the current mouse configuration. This handy utility lets you use your mouse in an easier and more intuitive way, with the ability to configure it to perform different actions based on a variety of circumstances. It's not only a good way to simplify the use of your mouse with Windows but also to take full advantage of the possibilities that modern mice offer. When used as a setting tool, it lets you change the position of the mouse buttons, activate and deactivate different mouse actions based on the current situation or set some predefined configurations to be automatically applied when the mouse is moved to specific areas of the screen. The application comes with an extensive library of setting configurations that are divided into three different categories: Automatic, Visual and Script based. The first group of settings contains the predefined configurations that are automatically applied when you move the mouse cursor to specific areas on the screen. The second category includes the predefined configurations that are applied to the current mouse state. For example, if the mouse is currently in contact with a certain area of the screen, the application will allow you to set up an "Active" area which will be highlighted in gray for a few seconds before the mouse will perform a specific action, such as activating/deactivating the scroll wheel or enabling/disabling the click event. The last group of settings includes the predefined configurations that are applied on the same mouse button that is currently in contact with a specific area of the screen. For example, if you move the mouse cursor to the bottom-right corner of the screen, it's only natural to want to set up a mouse button there so that it doesn't activate the desktop context menu. With the predefined configurations, you have an easy way to customize the behavior of your mouse to match your personal preferences or the current situation. Although there are a few predefined configurations, you will probably be forced to create your own settings in order to meet the requirements of your specific use case. Besides that, the application comes with a ton of useful information that is displayed on the screen so that you will always know what is currently happening and what mouse buttons are active. If you don't want to create your own settings, the application comes with a simple interface that lets you choose one of the predefined configurations or create your own settings manually. A detailed description of every setting is included in a

What's New in the Mini Desktop Digital Alarm Clock?

Mini Desktop Digital Alarm Clock is a small desktop enhancement utility designed specifically for helping you view the time and date displayed on your screen, as well as set up personalized alarms. The advantages of being portable Since this a portable program, it is important to mention that it doesn't leave any traces in the Windows Registry. You can copy it on any USB flash drive or other devices, and take it with you whenever you need to use a simple clock and time management utility on the breeze, without having to go through installation steps. Minimalistic looks By default, the tool reveals the date and time in a grey rectangle. There's no support for customization options in order to alter the looks of the application. Additionally, the utility lets you view the time of the alarm and its status (On or Off) in the main window. Everything is kept as simple and clear as possible, so there's support for only a few configuration settings. Setting up an alarm Mini Desktop Digital Alarm Clock gives you the possibility to create a new alarm by specifying the time (in hours and minutes) and entering a user-defined text message that is displayed when the alarm is triggered. You may type in the text directly in the main panel or paste the information from the clipboard. Additionally, you can make the program remain on top of other windows. The lack of configurable settings makes it an ideal tool especially for less experienced users who don't want to spend too much time configuring the dedicated parameters. However, several features are needed in order to improve the overall performance of the application. You are not allowed to choose between different sound notifications and upload a custom audio file from your computer, and run a certain program, just to name a few suggestions. Bottom line All in all, Mini Desktop Digital Alarm Clock proves to be a simplistic clock and time management app that comes bundled with limited features.
