Use xcopy /F to make sure that all the files have been uploaded. Synchronize a folder with FTP Create a local folder and synchronize it with an FTP server by searching all files on a remote network server and synchronizing only those files that differ in content. Download the XCopy.com instructions for a Windows XCopy.com command reference, which includes Connect to an FTP server with Windows PowerShell. Get all files from an FTP server with a specific pattern, and keep only those files that have different content. When you have hundreds or thousands of files in a big, slow-to-change folder, this can save you a lot of time. If you have a local folder with the same contents, you can easily synchronize it with any of those FTP servers you need.Q: Cannot open the project. Either the project was restored or the project is read only I am currently working with a C# Project but a few days ago, I lost all the changes and try to open the solution from the project manager it's showing me the following error: Cannot open the project. Either the project was restored or the project is read-only. When i want to change the files, the files in design view are changed with the previous state which is frustrating. I also tried to open the.sln file through notepad and copy it to my project manager but got the same error. Any other suggestion that i can perform to restore project using the version that I made. Thanks in advance. A: The problem was a corrupted.csproj file. Project manager try to repair this file and the problem is solved. Patient-reported outcomes: the real future of telemedicine.
