The initial impetus for AutoCAD was to develop a professional quality CAD program for use on personal computers. Therefore, it did not have a programmable drawing engine and was instead designed as a "dynamic stencil" for lay-out with the aid of predefined geometric objects. The intent of the program was to provide a tool for the creation of professional grade drawings and 2-D engineering designs. After the initial release, AutoCAD continued to be updated and the dynamic stencil feature was gradually replaced by a programming model, which allowed users to develop their own templates. In 1986, AutoCAD 2 was released, which was the first release to feature the programmable drawing engine. In addition to the programmable drawing engine, AutoCAD 2 brought the presentation and electronic publishing capabilities that had been developed by Autodesk for CAD apps since 1986. In 1990, AutoCAD 3 was released, which added the ability to create 3D models (models that are constructed from sections or "faces") and annotate the model, which became a core feature of AutoCAD. In 1994, AutoCAD 4 was released, which brought with it a new data structure known as a component datum. AutoCAD 2000 was the first release to be based on the Windows operating system and Autodesk's new platform, Creo. Creo was designed for use by enterprises rather than individuals, and it allowed for multitasking and collaboration. Although AutoCAD 2000 still supported a static stencil and a programmable drawing engine, the features that made AutoCAD 2000 innovative were not its primary focus. In 2002, Autodesk released AutoCAD 2005, the first release to have a completely new design and user interface, with a new context-sensitive menu system called "LiveView". The most notable feature of the interface is the use of a "sticky tool palette", allowing a user to move the tool of interest to any screen location that would make it easier to use. AutoCAD 2005 also introduced 3D navigation to the program, allowing users to navigate in 3D space in a similar fashion to how they navigate in 2D space. In 2004, Autodesk released AutoCAD LT, a stripped down version of AutoCAD that was designed for use on low-end PCs. Autodesk also released a stripped down version of AutoCAD for Macintosh in 2006, AutoCAD LC. LC was also released as a web app in 2007.

The drawing templates system allows users to create drawing templates, which are reusable custom layouts of blocks which define the appearance and layout of drawing components. These templates can be reused as part of a drawing to make it more consistent. The Revit model repository is an online repository for 2D and 3D models used in Autodesk's Building information modeling (BIM) software. It was originally developed by the U.S. Federal Highway Administration. Project files are created by the Autodesk Project facility. The Project format is a container file used to store project information and is similar to the Autodesk ASCII Format. Archiving Autodesk Vault is a commercial archive software product that enables users to archive files for safekeeping and retrieval. It creates an archive file that is a self-contained folder with subdirectories that contain files according to a user-defined categorization. Okay, this question is kind of weird but I really need some help here. I have a stored procedure that needs to insert data in a table with some values. The table has a primary key that is auto-generated. I can't delete the key or the auto-generation part. If I run the stored procedure from the server where the table is located the insertion works fine. But if I try to run it from my desktop pc (I'm testing locally) the whole thing fails saying that the key is already inserted. A: I suspect that the table is in a different database, if that is the case the database you are trying to insert into does not have a primary key and therefore cannot be inserted into. If that is not the case, then try connecting to the database you are using in the server and try running the procedure there. If it still fails then try running sp\_resetstatus in the server to see if there is something more interesting going on in the database engine. or to display of such banner. On the basis of the positive experience of the urgent surgery course at the Institute of Surgery of the University of Medical Sciences of Leningrad, the authors discuss methods of expanding and improvement of training courses and curricula for physicians. The possibility of setting up a surgical training center is analyzed on the basis of the enormous volume of surgical interventions, and the possibility of improving surgical and postoperative treatment by setting up comprehensive intensive care units, operative, diagnostic and ambulatory training programs for all physicians, including surgeons. The proposals are supported by the data of the Institute of Surgery of the Medical University of Leningrad.In 2011, only one congressional race in the United States was settled by a ranked-choice voting ballot, with Vermont's U.S. House district 4 race featuring three candidates. That was the closest ranked-choice election on record, according to data from the National Conference of State Legislatures and the National University of Singapore. Ranked-choice voting is not common in the U.S. and there are only a handful of jurisdictions across the world, including the United Kingdom, where voters rank up to their top three choices, according to the University of Oxford. For now, Maine is the only state that has adopted ranked-choice voting for legislative and statewide elections. The ballot question that was approved by voters in 2016 was the first time it was used for a statewide election. The new Maine election system will be used again for the 2021 elections, according to Maine Secretary of State Matthew Dunlap. In Maine, the system means that in a race between two candidates with the same number of votes, voters are asked to rank candidates in order of preference. If no candidate receives a majority of the first-choice votes, the candidate with the fewest first-choice votes is eliminated from the race. Voters' second choices are then counted and the candidate with the
