When I push a viewController (my second one), I need to get the current controller (I think that is the controller that push the new page) Here is my code (I already try things like that and it's not working...):

```
-(void)viewDidLoad {  
    UINavigationController *cur = [self  
        topViewController]; [self  
        setRootViewController:cur]; } How
```

can I do that? A: Do this instead, then your app should work as expected:

```
-(void)viewDidLoad {  
    UINavigationController *currentController  
    = self.topViewController; [self setRo  
otViewController:currentController];  
}
