Iclone.Library.2015.Content.Collection.-manaze crack.Q: gdb does not recognize my variable - data is not found I am investigating a crash in libvirt. The application that is crashing is one where a user can connect to a VM over ssh and run vmware workstation. A lot of user data is stored in std::string fields that are used to configure the user's connection. I've attached gdb to the crashed application.
