With Image Ready 2006, you can import a whole range of raster and vector files into Photoshop. (The box, Importing and Exporting Files, gives more information.) Creating a layered image Photoshop's paint bucket and paint tools have always been the workhorse tools for editing layers. You can create a new layer by selecting the layer tool from the Tools panel. (You can also select Layer⇒New Layer or press Shift+Ctrl+N.) As I discuss in the sidebar "Using the layer tools," you can also layer your image with drag-and-drop commands. The ability to see all layers within a document is a huge benefit to designers because it lets you adjust each design element at will without fear of damage to another area of the image. To insert a new layer, select Layer⇒New⇒Layer. Figure 5-3 shows a layer on which a new layer has been inserted. You can see the effect of the new layer below the original layer. **Figure 5-3:** A new layer is inserted on top of the layer below. Using the layer tools You use the layer tools to control the visibility, order, and strength of layers. The tools include the following: Layer tool: Drag this tool with your mouse. Click the image to select the layer, and release the mouse button. By default, the layer is chosen and the image is selected, but you can also create new layers with this tool. You can see the tool in Figure 5-4. You start from the bottom layer and work your way up, with all the layers below visible. You can switch between a painting and selection tool if you want. You also have the ability to add or delete layers. **Figure 5-4:** The Layer tool moves the current selection down the stack of layers in a document. Layer mask: Like the Layer tool, this is a painting tool that enables you to paint out portions of an image layer. Use the Layer Mask control (revealed in the box "Adding and removing a layer mask,") to select the area of the layer that you want to paint. You can see the Layer Mask tool in Figure 5-5. To add a layer mask, choose Layer⇒New Layer Mask. You can also add a layer mask by pressing Shift+Alt+N. **Figure 5-5:** You can

If the layer is to the top or bottom of the layers, it moves to the top or bottom. To rearrange the layer order, you can move the layers up and down with the arrow buttons located at the top or bottom of the panel. To move a layer to the top or bottom of the panel, you select the layer and drag it to where you want it to be. Then press Alt+F8 or go to Layer > Lock > Unlock.
