In Stardander Revenant you are a follower of the light and you are fighting against the dark forces. In a procedurally generated world full of new adventures you will be trying to survive in a universe that is becoming more and more dark, where the dark Forces are conquering every planet. You will be using a variety of weapons and devices to protect your family from the evil, while trying to improve your combat skills, and make your way through the dark universe. About me: My name is Jurek Vojtek and I am a player developer and "gamestudent". To put it simple, I develop games and/or interactive stories. It started while I was in high school when I made a little game about the life of the seven dwarfs. It was the first time I actually was developing something on my own and it was certainly the moment I knew that I was going to be a programmer in the future. It took me almost five years to finish my first game, an interactive text adventure called Stardander. The game focused on exploration and disguise. The disguise-system was actually inspired from the book, The Secret Garden, and it was a really challenging experience for me to make it work and almost destroy the whole thing. However, after a lot of work, I managed to create a functioning and entertaining game. For more information check out I am a programmer and a student of Computer Science. I have a bachelor's degree in Computer Science from the University of Warsaw. My main areas of interest are game development, text-adventures, abstract and graphical algorithms and logical puzzles. I originally built Stardander Revenant as a graduation project and then I released it as a free download on my website, but due to its popularity I decided to make Stardander Revenant available to everyone. Since then it has been downloaded more than 2 million times. I have been working on Stardander Revenant for more than two years now and I am very proud of the result. I would like to thank my wonderful fans for being the reason why Stardander Revenant exists and I would also like to thank everybody who is helping to spread the word about my game! About my website: My website is full of games and interactive stories that I have developed in the past or that I am currently developing. As you can see, I have very diverse interests and I am a big fan of games and interactive stories. Screenshots: Black

And do not hesitate to leave us feedback and suggestions, as we will reply, of course, and make the game even better! [Contact Us] Since this game was first released the number of players, downloads and statistics have become extremely important to us. At the same time, we still have thousands of new players every month, and we want to know how this game is received by our players. I don't know if any of you have ever made some kind of video blog or forum post, but sometimes it's difficult to reply to the questions that are asked. If you have a question or video blog post, we would like to hear from you. [Contact Us] I am new to this site, as it has just recently been available for download (about a year ago). It seems to me that you have many questions about the game. You say you haven't been able to understand what any of the instructions or descriptions mean, and that you couldn't find any tutorial or “manual” when you first downloaded the game. I have no idea how to answer all your questions, and I don't know how to address the areas you are asking about. I can only tell you what I do know, or have seen happen, while playing the game. I am a Computer Science major with little experience with games, and I haven't played many puzzle games. Your biggest problem seems to be that you want step-by-step instructions on how to play. Unfortunately, we cannot provide this. We know that a “manual” would be better than nothing, but it would have to be the best one on the market. It would probably take a large developer team, but to be truly useful, there would have to be something for
