I changed the above lines to : sed '1s/\/\1/g' and they failed to work. I also tried this (extracting 2 from the second line): sed '1s/^.\{1\}\>/\1/g;1s/\(.\{2\}\)\1\>/\1/g' But I get the same result. I'm quite new to GNU sed, so any help would be appreciated. A: Does this work for you? sed -Ee '/^(\S.{2})\s/!d;s/^(\S.{2})\s/\$/' It's essentially just two different solutions to the same problem, so either would work. Q: I have an array with dates between a range. How do I get the range of dates included in it? I am trying to get the amount of dates between two dates. This is the array. array(4) { [0]=> string(10) "2016-07-14" [1]=> string(10) "2016-07-14" [2]=> string(10) "2016-07-15" [3]=> string(10) "2016-07-15" } I've tried the following code but it doesn't do the job. What am I doing wrong? foreach ($dates as $value) { $str = substr($value, 0, 10); $d = explode("-", $str); if ($d[2] == $beginMonth) { // find end date in previous month $endMonth = $d[1]; $endDay = $d[0]; $endMonthCount = $str_count_month - 1; $end = mktime(0, 0, 0, $endMonth, 1, $endDay); $from = mktime(0, 0, 0, $month, 1, $day); $to = mktime(0, 0, 0, $endMonth, 1, $end
