And it's free! ? Before you start learning Photoshop Elements, make sure you know how to use a desktop computer. If you've never used a computer before you should first read Learn How to Use a Computer. To make it easy for you, below I've compiled a list of the most commonly used Photoshop Elements functions. For detailed and in-depth information on how to use Photoshop Elements, as well as a more extensive tutorial, you can read the Photoshop Elements manual (PDF). And finally, if you like to explore different versions of Photoshop and have no idea where to start, be sure to check out the Photoshop Community. Tips and Tricks for Photoshop Elements Browse a single folder with all of your images. There are 2 ways of browsing a folder with multiple images in Photoshop Elements: Search for the folder in the folder window Ctrl+click and drag the folder to the other window (with the images shown as thumbnails) You can also add a folder to the Favorites window. Open the Favorites window and click Add Folder. Name your image(s) and then press Enter to add it to the Favorites window. Use Ctrl+Shift+A to access all of the menus and windows, or use the hotkeys on the keyboard. If you don't know how to use the keyboard in Elements, you can always try out the Keyboard Shortcuts feature. When you press Shift+Ctrl+I you will be presented with the Keyboard Shortcuts window. From the Keyboard Shortcuts window, you can access all of the default Windows menus (File, Edit, etc.). Use the Mixer panel to mix up colors The Mixer panel is the area you can use to colorize your images. In the following figure, I have highlighted some different areas to show you the Mixer panel You can adjust the color of certain parts of the image by using the Mixer panel. It's an extremely powerful tool if you know how to use it. You can use the Mixer panel to make any color in the image different. To access the Mixer panel, press Shift+Ctrl+E (or open the Color panel and then select Mixer from the panel's dropdown menu). After you select a color in the Mixer panel, you

Q: Non-blocking sleep() in C++11 with broken boost thread I tried to use the method described here: sleep(nanosecond) in C++11 (Boost implementation, by simply looking at the code) but for some reason it did not work. The pthread_slee() also works. I'm working on a embedded Linux, with POSIX threads, i.e. #include #include #include #include int main(int argc, char* argv[]) { pid_t pid = syscall(SYS_gettid); sleep(2); return 0; } Compiled with g++ -g -Wall -Wextra -Wpedantic -lm -o test test.cpp Produces warning: deprecated conversion from string constant to 'char*' [-Wwrite-strings] strlen(format_str)); ^ This is in a sense correct, since sleep() is deprecated in C++11 (well, since the time of issue). I came across this issue, but the above code does not compile with the commented line, so I assume that the issue has to do with the thread library. So to me it looks like this issue is exclusively with threading libraries which do not support Linux's sleep() call. Most of the operating systems seem to support it. One operating system that does not support the sleep() call is Cygwin (that one has to rely on the external pthread API). I used Intel C++ compiler version 12 with Linux version 3.8.2. I just downloaded their threading library version 3.9.5 on their website. Is there a mistake in the implementation, or is sleep() not supported? (I am open to any other solution, but I guess it should not be too hard to implement the
