Q: MongoDB
findAndModify - Is there a way to
change the removed value directly? The
MongoDB shell provide a very elegant
method to remove or change a
document. For example I can do:
`db.myCollection.findAndModify({ _id: ObjectId("4f9ac50d47c83545e8ade054"),
value: 5 }, { $set: { value: -2 } }, false,`

true, true, false, true); The only drawback is that I cannot, for example, change the removed value directly. The given value is always the new value. Is there a way to solve this problem? A: MongoDB (when using native driver) doesn't have such limitation, it allows you to change the value of documents you've deleted. of my personal experience. Newton's Laws of Motion and Analogy Conceptually, Newton's Laws can be thought of in terms of an Analogy to help visualize them. A body in motion will continue to move in a straight line unless acted upon by an external force. All forces can be

converted into accelerations which can be represented by vector values. Relative velocity is equivalent to direction Forces are represented by vector magnitudes. Forces applied along the same direction over a period of time become a centripetal force. For forces along perpendicular vectors, that is "acting" orthogonal to each other, then that is equivalent to "action-reaction" forces. The mass of a body is the same as the amount of force required to accelerate that mass to the rate of motion that body was already moving when the action force was applied. Forces applied to a body will cause a

body to accelerate in proportion to the magnitude of the force applied. For example, applying a force of 5 m/s^2 to a body will cause the body to accelerate at 5 m/s^2
