Now, that you are familiar with the toolbox of the application, its time to start using the basic concepts of the Freehand MX application. Some tips that will help you to start using the application. Portable Media Format (PMF) is a media container format developed by the FreeHand Consortium and is known as FreeHand PMF. The first portable image format based on the Portable Network Graphics (PNG) format, this file format was developed for the purpose of converting portable images to a non-proprietary format. Although FreeHand employs many of the technologies found in Portable Network Graphics, it is not a subset of the format. PMF files can either be saved with a Macromedia FreeHand file extension, or are titled using a more traditional Macromedia file extension. PMF was first available on Macromedia FreeHand MX version 4, released in 1999. The Open Source implementation was originally developed by Lascaux, Inc. Once you decide how you want to work, a new folder is created in your Freehand MX folder, containing all the folders you created when you first installed Freehand MX. Lets say you named that folder 'Sanity' and you named it 1. The name of the folder in which you have added the image can be renamed. This is the folder which will be automatically added to the list

of folders in the Window at the top of the Freehand MX Editor. If the image is selected and the image is being viewed in the Freehand MX Editor, it will be displayed as an image, if you wish to edit the image, the image will be displayed in the Freehand MX Editor as a editing tool.
