Honey pot is a popular spyware that is a more advanced version of the original Keylogger. It also manages to extract the data from computer even when antivirus is running. Description: Killer Ceiling is a popular spyware that is a more advanced version of the original Keylogger. It also manages to extract the data from computer even when antivirus is running. Description: The app that keeps on coming back is the Keylogger, but if you want an application with an advanced version, you have to find one with a higher level of details. How about a spyware that makes your desktop and browser a piece of cake? If you are a spy, you might want to check out Keylogger. Keylogger works in a couple of ways. The first one is that it will make use of HTML to scan the browser. If it finds any keywords, it sends the data to a remote server. You can find more information on this method here. Keylogger can also send files to its remote server. You can use a network or a USB connection to send the data. You can find more information on this method here. There is another way in which Keylogger works. It will set a specific browser cookie and when you visit a website, it will set that cookie in the browser and will monitor your actions. This method is known as Session Trapper. Keylogger can be used in a variety of ways. The first way is to log your keystrokes and that includes the time, website you visit and the data you type. You can even use this information to gain access to your bank account. Another application is to hide files in the Internet and watch you as you visit them. When you are logged into the Internet, Keylogger will look for the files and send them to the remote server. Keylogger can also be used to spy on your kids. It will monitor their browsing and download the files from websites that they are looking for. Keylogger is a spyware and it is considered to be a malware. It can cause severe damage to your computer, but it is not always that simple. In order to protect your computer, you need to have a spyware scanner in your PC. Description: CyberGhost is one of the best spyware tools in the market. It has two editions, one for free and another for those who have a paid account. The free version is made only for personal use, while the paid version comes with many additional features. Description: F-Secure is the most popular and trusted name in the field of spyware protection. In addition, it is the leader in the world of mobile phone security as well. It protects people on a phone, computer, tablet, and even on their
