Lightroom has been a solid editing and organizing tool for digital photographers for years. It has also been one of the most powerful organizing tools for managing creating the installation media for a desktop application. Lightroom's latest update brings it into a new category. It is now an organizing tool used to prepare professional prints. The volume of data that Lightroom receives from the camera's sensor and which is transferred into Lightroom is enormous. An example is that 10 megapixel files input into Lightroom reach 9 gigabytes on disk easily. This number is not a problem for a single camera, but bigger files can become a problem when importing many files. The latest Lightroom update adds the ability to easily and quickly transfer edited raw images directly into Photoshop or Photoshop Elements. In essence, raw images that Lightroom has already worked on can be loaded into the editing programs more quickly. This is by far the best method of handling this data. An improvement to this method is that the raw data is placed on a special RAW disk, which is faster to write to than a data disk. Adobe does recognize that there are still problems with the direct transfer method and will improve this process over time. There remains the problem with those of us who have chosen to use third-party editing software to prepare files for output to the computer. We spend a lot of time on our computers These days, and photos and videos of just about every aspect of our lives often end up on the screen. With Photoshop Elements, you can carefully edit, resize and manipulate them to create new artistic pieces of digital art, or to enhance the ones you already have. Think of it as a digital photo album - but with many tools aimed at editing the whole group of photos rather than one or two.

**What It Does:** The Type Tool is useful when you want to add special effects to your type. For example, *Cursives* can be used for any type of cursive word, and *Outlines* do the same for older hand-drawn letters. In almost any modern photo editing program, it is possible to reposition objects in your image. With the Move tool, you can summon the handles of an object to reposition that particular part of the image. While the Move tool is great when used on photos, it can also be a great tool for moving objects within a video clip. **What It Does:** The Selection tool allows you to select an area in your photo or video. It also makes it possible to deselect areas that you made previously. The selection can then be moved, drawn, and removed, for example to create a box around a subject in an image or to make a selection that represents the inside of a circle. Designers share ideas, communicate with editors and producers, and display designs in the always evolving world of mobile and web applications. To make it easier to share and bring work forward, Adobe Sensei-powered Placeholders, previously announced, are now available for all Creative Cloud users. Adobe Photoshop features a powerful new image color management system. Photoshop has been extended with new color, built-in web-safe, and mask tools, plus a new Affinity Photo JavaScript API that ensures the power of the experience, while making it simple for designers to customize the user interface. Experience is the name of the game at Adobe MAX, and definitions of creatives - both professionals and passionate hobbyists - are changing. Many creatives are working on the web in their browser, and now Photoshop is powering this expanding landscape. Five new features - Edge Warp, Clip Warp, Border Warp, Auto Mask and Capture Mask - help photographers capture, edit and deliver their work when they're not using Photoshop. These features are essentially extensions of Fluid Warp, and add capabilities that can transform images in the browser - from capturing one-time shots to faster, growing and expanding photo projects. "As we exit 2020 and look forward 2021, we're setting the stage for our future direction with powerful new innovations in Photoshop," said Daniel Arshakoff, chief product officer, Adobe. "Delivering new experiences for different uses and across multiple devices - like installing Photoshop on Magic Leap and adding the ability to send editable files to our mobile web app - is just the beginning of our bold vision."
